Xenon Pay

Xenon Eco System

Eco System Blue Print

x2P

Introduction

This document is the first official blueprint of the Xenon Pay Eco System, **The Xenon Eco System**.

This blueprint contains the full explanation and visualization of the project's Eco System.

Xenon Pay is not just a crypto currency asset. In fact, the project has a lot more to offer.

We strive to offer multiple unique solutions by targeting multiple sectors and merging them together.

Xenon Pay is the first project to design their Eco System on a unique way with these sectors combined.

On top of that, the Xenon Eco System is designed so that the holders can actually decide if they want to be a part of this system. This choice is up to every individual.

Table of contents

1. Operating Blockchain
2. Xenon Machine (Farms)
3. Xenon Wallet
4. Xenon Kart: Crypto Edition
5. Xenon Pay
6. Xenon Play
7. Xenon NFT's
8. Xenon Card
9. Conclusion

Operating Blockchain

Binance Smart Chain

1. Ethereum Compatibility: The first practical and widely-used Smart Contract platform is Ethereum. To take advantage of the relatively mature applications and community, BSC is designed to be compatible with the existing Ethereum main net. This means most of the dApps, ecosystem components, and tooling will work with BSC and require zero or minimum changes.
2. Staking Involved Consensus and Governance: Staking-based consensus is more environmentally friendly and leaves more flexible option to the community governance. Expectedly, this consensus should enable better network performance over proof-of-work blockchain system, i.e, faster blocking time and higher transaction capacity.

We (Xenon Pay) want to play an active role in expanding and future developing our technology by implementing our unique Eco System. There is still a lot of progress to be made in the practical application of crypto and that's what Xenon Pay is all about.

Why Binance Smart Chain?

The Binance Smart Chain not only offers a great environment for payment traffic, they also have a unique consensus protocol that makes it a lot easier for Xenon Pay to improve their Eco System as a more complete product. Xenon Pay truly believes in the philosophy of the Binance Smart Chain and we are confident that this is the perfect network to operate from.

Consensus and Validator Quorum

1. Blocking time should be shorter than Ethereum network, e.g. 5 seconds or even shorter.
2. It requires limited time to confirm the finality of transactions, e.g. around 1 minute or shorter.
3. There is no inflation of the network's native token BNB, the original block reward is collected from transaction fees, and it will be paid in Xenon Pay's native currency, called X2P.
4. It is compatible with the Ethereum system as much as possible.
5. It allows modern proof-of-stake blockchain network governance.

Xenon Machine (Farms)

ECOSYSTEM | BLUEPRINT

Telegram: <https://t.me/x2pofficial>

Introducing the Xenon Farming Machine

Xenon Pay developed one of the most powerful machines in the entire crypto space. The Xenon Machine is designed to combine both Crypto Payment and Crypto Gaming applications in a very unique way that the crypto space has never experienced before. At Xenon Pay, one of our ultimate goals is that every individual can make the choice between Passive Holding and Play to Earn.

On top of that.. if you decide to use the Xenon Machine, you will automatically play a part in creating a stronger environment for Xenon Pay. It's a win for both individuals and the project.

Generating Unique Rewards

In order to generate rewards from the Xenon Machine, you need to insert Xenon Liquidity Tokens or Xenon Pay Tokens. By inserting one of these assets, you will activate the reward mechanism. You will generate higher rewards from the Xenon Machine with Xenon Liquidity Tokens in comparison to Xenon Pay Tokens.

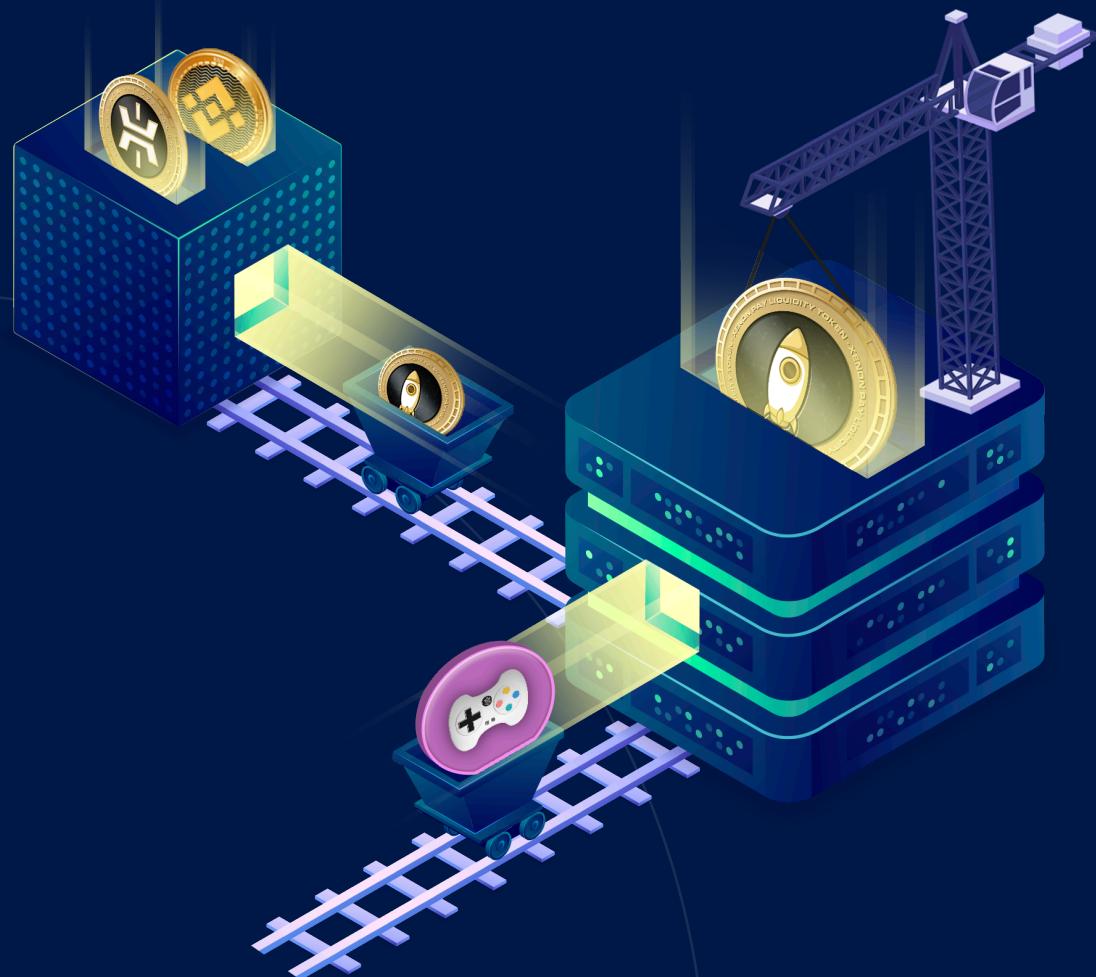

Once the reward mechanism is activated, you will be able to collect your unique 'Xenon Play' rewards anytime.

Every individual has the choice whether they hold their 'Xenon Play' rewards and treat them like a regular currency, or save them and use them to dive into the unique Play to Earn experience.

Xenon Machine (Farms)

01

Create Xenon Liquidity Tokens

To start creating Xenon Liquidity Tokens, you will need X2P and BNB. Once you got both X2P and BNB ready, your next step is to go to the Xenon Swap ‘Liquidity’ section and add both X2P + BNB to the liquidity pool. By adding both X2P + BNB to the liquidity pool, you will be rewarded with Xenon Liquidity Tokens (CakeLP).

Every individual has the choice to change back their Xenon Liquidity Tokens to X2P + BNB at any time. This would require repeating the same process, but backwards.

02

Activate the Reward Mechanism

Now that you have created your Xenon Liquidity Tokens, you can move on to the Xenon Machine. You can find the Xenon Machine by navigating through Xenon Swap or Xenon Pay’s official website. Once you have arrived at the Xenon Machine, you will have two options: 1. You can insert your Xenon Liquidity Tokens. 2. You can insert Xenon Pay Tokens. By inserting Xenon Liquidity Tokens or Xenon Pay tokens, you will activate the reward mechanism of the Xenon Machine. You will generate higher rewards with Xenon Liquidity Tokens in comparison to Xenon Pay Tokens.

There are no special requirements in order to activate the Reward Mechanism of the Xenon Machine. All you have to do is insert your Xenon Liquidity Tokens or Xenon Pay Tokens.

03

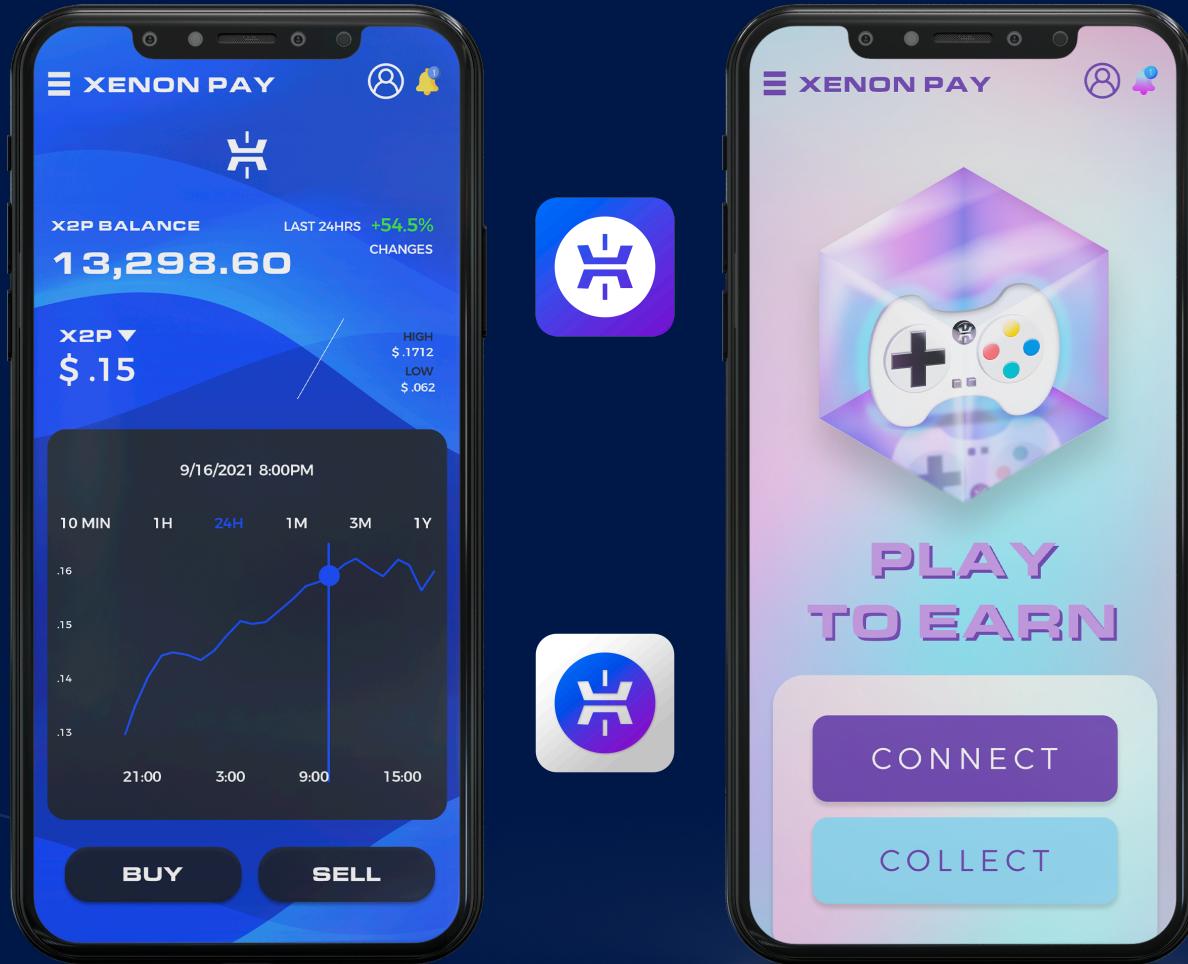

Collect your Xenon Rewards

Once you have activated the Reward Mechanism, you can claim your rewards from the Xenon Machine whenever you want to.

All your Xenon Rewards are stored on the blockchain until you decide to claim them. All rewards are being distributed in ‘Xenon Play’. Read more about ‘Xenon Play’ in the ‘Xenon Play’ chapter.

Xenon Wallet: Crypto Storage

Store Your Crypto Assets Safe & Secure

Xenon Wallet encrypts your private keys and transaction data on your device so that no one can access your crypto assets but you. You can also enable the 2FA Protection or Password Lock to prevent third parties touching your crypto assets. Don't give control of your private keys to centralized exchanges that can suffer from hacks and lost funds. Xenon Wallet is the ultimate crypto storage.

Crypto Payment Solution Integration

Send and receive any of the many supported blockchain assets with the touch of a button using wallet addresses or QR Codes. Do you need to send or receive Xenon Pay? The transaction will be processed immediately and the average confirmation time is three seconds. The amount being transferred is completely up to the sender. Xenon Wallet also supports special crypto payments or withdrawals made by smart contract calls.

The Unique Play to Earn Technology

Dive in the unique Play to Earn experience that Xenon Pay has to offer. By making use of the 'Connect' button inside the Xenon Wallet you have the option to connect your wallet to 'Xenon Kart: Crypto Edition'. As soon as you are connected to the game you can play for Xenon Rewards (Xenon Play), or spend 'Xenon Play' in game for additional items. You may use the 'Collect' button to claim your earned Xenon Rewards (Xenon Play) or Xenon NFT's if they are waiting for you. All rewards are saved on the blockchain.

Xenon Kart: Crypto Edition

Play to Earn Daily Crypto Rewards

Xenon Pay brings you the first ever DEFI Crypto Racing Game in the crypto universe. In order to enable 'Play to Earn' mode, make sure you are holding Xenon Play Tokens and connect your Xenon Wallet to the Xenon Kart: Crypto Edition Application. Once you are connected, you will start earning rewards. You can use these rewards to upgrade your racing equipment or transfer them to your wallet. While playing 'Play to Earn' mode, you can also be rewarded with rare Xenon NFT's. (Read 'Xenon NFT's')

Challenge other Crypto Projects

You will have the opportunity to play against other crypto projects / icons from the crypto space and race against them to get rewards. Some featured projects / crypto icons are: X2P Peter, Shiba Inu, Doge, Binance Bee (CZ), CoinMarky (CMC), Elon Musk and many more. The project / Icon you want play with is totally up to you.

Challenge crypto holders worldwide in multiplayer! You can race up to seven other players, whether they're registered as in-game friends, nearby or scattered around the world.

Sign up your project for Xenon Kart: Crypto Edition

There are currently still a few open slots for Xenon Kart: Crypto Edition. Are you part of a crypto project that you would like to see featured in Xenon Kart: Crypto Edition? Check out XenonPay.org or send an email to developers@xenonpay.org to find out if your project meets the requirements to be featured in the game.

Xenon Pay (Native Currency)

Native Currency - Xenon Pay (X2P)

Xenon Pay (X2P) is the main crypto currency of the Xenon Pay project. Xenon Pay (X2P) is designed to mainly function as a payment solution, but it also functions as a passive way of income. Xenon Pay (X2P) targets to function as a payment solution through both online and real life merchants. The benefit of holding X2P in digital wallets is that holders receive rewards which will be distributed from the fee charged on every transaction (buy or sell order) made on the X2P Network, which becomes an automatic source of passive income for all holders of Xenon Pay (X2P).

Xenon Pay (X2P) is a decentralised crypto asset. This means that holding X2P fulfills the objective of decentralization that makes it the most secure form of crypto trading. Users can also benefit from the low gas fees through Xenon Swap or Pancake Swap, a feature not offered by many DEXs in the crypto universe. (Gas fees and Transaction Fees are two different things.)

The total currency supply of Xenon Pay exists out of 150,000,000 X2P. Xenon Pay charges a 15% Tax Fee from each transaction. This 15% Tax Fee contains the Tokenomics. 10% is redistributed through all the holders and 5% goes to the Liquidity Pool of X2P.

Xenon Play (Reward)

ECOSYSTEM | BLUEPRINT

Email: developers@xenonpay.org
Telegram: <https://t.me/x2pofficial>

Introducing Xenon Play (XPLAY)

Xenon Play functions as the official Xenon Reward that can be generated from the Xenon Machine after activating the reward mechanism by inserting Xenon Liquidity Tokens or Xenon Pay Tokens. You can also use Xenon Play in the upcoming Xenon Pay Gaming Series such as Xenon Kart: Crypto Edition or Xenon Play: Minigames. Both games will have a Play To Earn game mode.

It's up to each individual whether they keep their Xenon Play (rewards) to use them in the upcoming games or if they treat it like a trading crypto asset. The fact that it can be treated like a trading crypto asset also gives each individual the chance to sell their Xenon Play (rewards) whenever they want, or give other people the chance to buy Xenon Play if they would like to do so.

The total currency supply of Xenon Play exists out of 500,000,000 XPLAY. Xenon Play charges a 5% Tax Fee from each transaction. This 5% Tax Fee will be used to fund the Reward Mechanism in the Xenon Machine and Xenon Gaming Developments.

Xenon NFT's

Play to Earn Xenon NFT's

By activating the 'Play to Earn' game mode, you will be able to collect rewards and parts to customize your character and upgrade your personal racing equipment. By upgrading your character and racing equipment, you will create your personal Xenon Kart Icon. By racing against other players in regular races, you earn Xenon Play Rewards. The amount you earn depends on your results. You can win Xenon Racing Cups by winning racing tournaments against other players with your personal Xenon Kart Icon.

Each individual has the chance to convert both Xenon Play Rewards + Xenon Racing Cups into Xenon Boosters. Xenon Boosters can be used to compound your own Xenon NFT's by merging the Xenon Boosters with your Xenon Kart Icon. The Compounding Process will not have a 100% success rate, which makes it even harder to obtain the Xenon NFT's.

Trade your NFT's through the Market Place

Xenon NFT's can be traded through the Xenon NFT's Market Place which will support the upcoming releases from the Gaming Series. This market place will also support Xenon NFT's from the Crypto Payment Solution Series and other third party NFT's.

Xenon Payment Card

ECOSYSTEM | BLUEPRINT

Email: developers@xenonpay.org
Telegram: <https://t.me/x2pofficial>

Spend your X2P with the Payment Card

One of the main goals for Xenon Pay in the future is to function as a crypto payment solution. Xenon Pay offers a quick transaction block confirmation time, much faster in comparison to other blockchains in the crypto space. Xenon Pay aims to create a healthy decentralized payment environment. Adoption by the mainstream audience is a crucial key part in order for the Xenon Payment Card to release and be developed for daily payments. By partnering up with different merchants and building out the Crypto Payment Solution Eco System to reach new improvements and heights every year, things might accelerate very fast.

Customized Fees

While the Tokenomics Mechanism of X2P charge you a 15% fee, this will be a lot different with the Xenon Payment Card. The Tokenomics are designed for holding purposes, the Payment Card will be designed for Payment purposes. These are two different factors and obviously two different kind of fees. While recharging your Xenon Payment Card, you are transferring the funds to a completely different environment. The payment environment will have a low fee but zero Tokenomics. This is where every individual is free to set his/her preferences.
